

**AES** aims to provide high quality, accurate ecological consultancy advice for the integrated development of environmental conservation and business.

**AES Applied Ecology Solutions Pty. Ltd.** offers high quality specialist ecological advice to businesses operating in the offshore marine environment and is one of only a small number of companies world-wide that specialise in providing independent advice to the seismic industry on issues concerning marine mammals (particularly whales and dolphins).

“sustaining business and ecology”

### Experienced and fully trained observers

In response to the demand for competent and skilled technicians, **AES** supports a network of over twenty five ready-trained and technically skilled ecologists / marine biologists for offshore fieldwork and is in the position to provide independent observer training, as required.

### Passive acoustic monitoring

**AES** owns and operates Passive Acoustic Monitoring equipment; is involved in the ongoing development of these systems; and will provide hardware tailored to the requirements of your project.

### Quality assurance

**AES** understands that quality assurance in ecological consultancy is measured only by the skills of personnel. Teams and methods tailored to the needs of individual clients ensure cost-efficiency and operation to standards of scientific best practice. Key personnel have operational experience of seismic vessels and teams are fully familiar with survey techniques and equipment.

### Provision of equipment

- acoustic monitoring arrays;
- ‘big-eye’ binoculars; and
- video-ranging.

### ‘The full package’

#### Other services provided by AES

- Survey design;
- Implementation and management;
- Approvals and permits;
- Environmental performance assessment; and
- Comprehensive reporting.

### Reporting

**AES** is on hand to provide progress reports throughout projects. Often the result of a regulatory requirement, final reports are written to be objective, comprehensive, concise and intelligible. At all stages of project implementation **AES** staff monitor environmental performance and provide clients extra value by recommending improvements to the approach for any future work.
